

2023 Predicted Apple Harvest Dates – West Central Michigan Region

Bill Shane and Emily Lavelly, MSU Extension

The information below includes predicted dates for peak harvest. Actual harvest dates may begin before and extend after these dates, and it is likely to vary based on specific location and conditions. This information is intended to be used by commercial growers to start planning harvest management. Interpretation is necessary for marketing purposes and fruit may be available in retail locations at different times.

The predicted harvest dates for all [Michigan State University Enviroweather Stations](#) are now available online and can be determined using the [Apple Maturity Model on the Enviroweather Website](#). These models for McIntosh, Jonathan, and Red Delicious calculate predict harvest dates based on full bloom date and the temperatures in the 30 days after bloom.

Most varieties appear to be several days ahead of normal harvest dates. Harvest dates may need to be adjusted as we get closer to harvest.

Crop load is very good in most locations. In general, return bloom was good in most varieties and most locations. Gala crop load is moderate to heavy across the region. Honeycrisp crop load is somewhat variable across the state. Blocks with light croploads will mature 3 or 4 days sooner than the predicted harvest dates while heavy crop loads will mature up to a week later than the predicted dates.

Conditions during August and September will also affect harvest dates. If hot stressful weather occurs in August or September, apple maturity will be advanced, especially in early to mid-ripening cultivars.

Stop-drop materials. ReTain application should be applied 30 DBH (days before harvest). Harvista can be applied 3 to 7 DBH. Use Table 3, 2023 Predicted Harvest Dates for Other Varieties, to time ReTain applications and adjust for varieties and locations.

The tables below list the normal and predicted harvest dates for varieties across the state. Table 1 lists the predicted harvest dates for locations across the state of Michigan for 2023. Table 2 lists this year's predictions compared to normal and last year. Table 3 lists the predicted harvest dates for 2023 for other varieties for the west central region, centered on Hart in Oceana County. This year's predicted dates for other non-modeled varieties are a rough estimate based on the McIntosh, Jonathan, and Red Delicious predicted dates and historical experience in the area.

Table 1. 2023 Full bloom dates and predicted peak harvest dates.

Station	Full bloom date 2023			Predicted harvest date 2023			Observer
	McIntosh	Jons	Reds	McIntosh	Jons	Reds	
SWMREC	4-May	5-May	7-May	4-Sep	18-Sep	27-Sep	Shane
Deerfield*	5-May	7-May	5-May	6-Sep	26-Sep	2-Oct	*
Romeo*	11-May	12-May	13-May	11-Sep	2-Oct	10-Oct	*
Sparta	7-May	8-May	8-May	7-Sep	27-Sep	3-Oct	Brown
Hart	13-May	15-May	16-May	13-Sep	7-Oct	12-Oct	*
NWMHRS	14-May	18-May	20-May	14-Sep	4-Oct	9-Oct	Rothwell

*Dates indicated by model, not by actual observation.

Table 2. 2023 predicted peak harvest dates compared to normal and last year.

Station	Days -/+ normal*				Days -/+ last year*		
	McIntosh	Jons	Reds		McIntosh	Jons	Reds
SWMREC	-6	-4	-1		-4	-3	-2
Deerfield*	-4	5	-6		-1	3	3
Romeo*	-2	7	7		-2	5	6
Sparta	-8	1	0		-5	0	0
Hart*	-3	4	2		0	8	7
NWMHRS	-8	-2	-8		-3	1	0

**Dates indicated by model, not by actual observation*

** - is days earlier, + is days later than normal*

Table 3. 2023 Predicted harvest date for West central region, based on Enviroweather weather data

Variety	Predicted
Paulared	23-Aug
Zestar	23-Aug
Gingergold	25-Aug
Gala	8-Sep
McIntosh	13-Sep
Honeycrisp	16-Sep
Empire	22-Sep
Jonathan	7-Oct
Jonagold	7-Oct
Fuji	11-Oct
Golden Delicious	11-Oct
Red Delicious	12-Oct
Idared	17-Oct
Rome	22-Oct
Braeburn	2-Nov
Goldrush	8-Nov

**Dates in this table were determined from average observations by industry members in the region.*
