District 9 goals and expected performance.

Conducting On-Farm Research for Improving Rangeland Management

Improved Water Quality Supported by SIDMA

Active IWR Projects In District 9

- Increasing Climate-Resilient Farms**
We are working with producers across 20 farms in Michigan and conducting long-term research at Kellogg Biological Station to use soil health practices to increase climate resiliency.
- Social Indicators Data Management and Analysis Online Tool Upgrades**
This initiative modernizes the Social Indicators Data Management and Analysis (SIDMA) platform—an essential, free, online national tool for watershed and conservation program evaluation. SIDMA's updated usability, functionality, and accessibility will help agencies and watershed groups better track behavioral and social outcomes that lead to improved water quality and reduced nonpoint-source pollution.

Healthier Streams, Wetlands and Lakes For A Healthier Michigan!
