

Gardening journal

(addendum to Lenawee County 4-H Static Project Record Book)

Use these pages to show your growth in the gardening project. Write about what you learn and your experiences in the garden. You might include this information: starting plants from seeds, purchasing plants, transplanting information, fertilizing, dealing with diseases and pests, experimenting in the garden, and harvesting. You might write about new plants and techniques that you use to help the plants thrive in the garden (stakes, covers, etc.) Photos and drawings will help tell the story. Add additional pages when you need them. This section might also be the place to put information that you will refer to again, such as information about soil and other types of growing media.
